

Data Analytics & Business Intelligence Portfolio

Portfolio focus: MSc Information Systems for Business Performance graduate with a commerce background and hands-on sample work in Tableau dashboards, Excel-based analytics, data cleaning, exploratory analysis, business intelligence strategy, and management-facing reporting.

BI & Dashboards

Tableau, Power BI, Excel dashboards

Data Analysis

R, Excel, data cleaning, EDA

Data Management

MySQL, ERD, 3NF, governance

Technical Tools

Python, GitHub, HTML, JavaScript

Selected Projects

1. Electric Vehicle Data Analysis - Tableau Dashboard

Tools: Tableau, dashboard design, KPI reporting, geographic analysis

Designed an interactive dashboard to explore electric vehicle adoption patterns across the U.S. using model year, vehicle type, make, state and electric range dimensions.

- Built KPI views for total vehicles, average electric range and BEV/PHEV split.
- Used trend, map, brand ranking and model-level views to support fast interpretation.
- Demonstrated ability to turn complex tabular data into a clear management dashboard.

Portfolio evidence: Dashboard displays 70,204 vehicles, 136.2-mile average electric range and BEV/PHEV segmentation.

**2. Streaming Platforms BI Strategy - Tableau & BI Roadmap**

Tools: Tableau, BI strategy, data visualisation, analytics roadmapping

Analysed streaming platform data for a Salt Productions case study, connecting dashboard insights with a broader business intelligence strategy.

- Analysed platform content volume, release-year trends, geography and rating categories.
- Recommended analytics capabilities such as data integration, governance, predictive analytics and personalisation.
- Translated visual findings into business recommendations on acquisition, localisation and recommendation systems.

Portfolio evidence: Dashboard compares Amazon, Netflix, Hulu and Disney+ content libraries and includes year, decade, rating and map views.

Excel, Retail and Data Cleaning Work

3. Vrinda Store Data Analysis - Retail/E-commerce Dataset

Tools: Excel, data cleaning, pivot analysis, dashboarding, retail analytics

Analysed a retail order dataset covering customer demographics, order status, sales channel, product category, location and order value.

- Cleaned and structured a dataset of 31,047 order records for analysis.
- Compared sales by channel, category, status, gender and state to identify performance patterns.
- Produced insight-ready summaries suitable for retail and commercial decision-making.

Portfolio evidence: Sample analysis shows INR 21.18m total sales, with Amazon, Myntra and Flipkart as the top channels.

5. Additional R Data Cleaning & Visualisation Work

- Completed R-based practice projects involving data preparation, transformation, exploratory analysis and visualisation.
- Used charts and summary statistics to identify patterns, compare categories and communicate insights clearly.
- Strengthens portfolio coverage beyond dashboarding by showing analytical coding and data preparation capability.

4. Graduate Numbers & Outcomes Dashboard

Tools: Excel, pivot tables, data modelling, dashboard reporting

Built an analytics workbook to explore higher-education graduate numbers and graduate outcomes by year, region, field of study and employment-related dimensions.

- Worked with 26,401 graduate-number records and 105,601 graduate-outcome records.
- Created summary structures for graduate trends, regional distribution and outcome patterns.
- Demonstrated ability to prepare structured datasets and communicate trends through dashboard views.

Portfolio evidence: Workbook includes separate data, dashboard, graduate numbers and graduate outcomes sheets.

Relevance for Data Science / BI Intern Roles

- Creates dashboards that convert raw data into business-facing KPIs and insights.
- Works across data cleaning, exploratory analysis, visual storytelling and recommendation writing.
- Combines technical tools with business context from commerce and information systems education.
- Retail project demonstrates direct fit for customer, order, channel and category analytics.

Additional Dashboard Evidence

6. Graduate Numbers & Outcomes - Excel Dashboard View

Tools: Excel, pivot charts, slicers, dashboard reporting, graduate-outcomes analysis

Designed an Excel dashboard to explore graduate numbers, field-of-study trends, regional distribution and employment-related outcomes across 2010-2019.

- Created a multi-chart dashboard with yearly trend, regional pie chart, field-of-study breakdown and employment-outcome trend views.
- Used pivot-based structures and slicer-style filtering to support interactive exploration by graduation year and field of study.
- Demonstrated practical Excel BI capability by combining data preparation, dashboard layout and management-facing visual reporting.

Portfolio evidence: Dashboard screenshot shows the Excel workbook view with multiple charts, filters and graduate-outcome visuals in one reporting page.
